

FileXpress® Command Center is your digital dashboard for all file transfer activity, inside and outside the enterprise. Transfer-related events can be initiated, tracked, logged, audited, and supported—all from one central location.

With FileXpress Command Center, you can:

- Centrally administer your file transfer infrastructure via a web browser.
- Configure and execute file transfers between multiple remote servers.
- Access detailed audit records for all transfers across all platforms.
- Use reporting tools to provide meaningful data on file transfer activity.
- Extend the execution and management of file transfer activity to new applications via service-oriented architectures.

Product Highlights

Centralized Management

Using FileXpress Command Center's browser-based console, administrators can view and manage all file transfers inside and outside the enterprise. For example, administrators can configure servers, add or delete servers and users, and enter file transfer schedules and instructions.

Auditing and Reporting

FileXpress Command Center provides a full suite of online inquiry tools with powerful auditing and reporting capabilities. With these tools, you can quickly search, locate, and drill down on specific file transfer events. You can also access detailed information about each transfer, presented in a logical, readable format.

Real-Time Alerts

FileXpress Command Center sends real-time status alerts via desktop and handheld devices. This instant notification empowers IT staff to resolve issues quickly when problems occur.

Integration with Enterprise Applications

FileXpress Command Center has an open architecture and a full set of APIs, including web services via SOAP, Java classes, ActiveX controls, and scriptable command-line interfaces—all of which allow enterprise applications to configure, execute, and monitor internal and external file transfers.

Other FileXpress Products

FileXpress Platform Server

FileXpress Platform Server is the engine that powers your file transfer infrastructure. It securely delivers files of any size, across all major platforms, to any location.

With FileXpress Platform Server, you can:

- Provide consistent file transfer functionality across IBM, z/OS, Windows, UNIX, and Linux systems.
- Support service-level agreements with reliable delivery capabilities, including robust event alerts, automatic retries, and packet-level data integrity checking.
- Receive notification when file transfers are successful—and when they fail.
- Watch specific directories and automatically transfer files placed into them.
- Automate the transfer and post-transfer processing of files.

FileXpress Internet Server

FileXpress Internet Server is the portal through which all Internet-traveling files flow. Built to support the latest web and security technologies, it lets you safely interact with partners and customers around the globe.

With FileXpress Internet Server, you can:

- Make files available to partners and customers.
- Allow partners and customers to upload files to your internal servers.
- Brand your own file transfer web page, where users can pick up and drop off files.

TECHNICAL SPECIFICATIONS

Platforms

- Microsoft Windows Server (Win32 and x64)
- SUN Solaris
- Linux
- VMware

Application Servers Supported

- Apache Tomcat
- IBM WebSphere
- BEA Weblogic

Compliance

- Detailed auditing
- Support for PCI, Sarbanes-Oxley, HIPAA, and GLBA
- Embedded Crystal reports
- Customizable reports

Security

- X.509 certificates support
- Public/private certificate support
- LDAP authentication (including Active Directory)
- Support for web SSO solutions
- FFIEC-approved, 2-factor authentication
- Time-of-day access controls
- User, group, or department administration
- Centralized data repository not required
- Built-in authentication repository
- UserID/password and certificate authentication
- Proxy accounts

Integration

- Web services architecture
- LDAP support
- API support
- SOAP interface
- Enterprise application integration
- Rules-based data processing
- Rules-based alerts

Encryption

- SSL v.3 support

- Integrated PGP support

Efficiency

- Support for load balancers
- High availability clustering/failover support

Management

- Delegated administration
- SNMP trap support
- Centralized administration of all components
- Heartbeat technology
- Automated provisioning/decommissioning of servers
- Service status monitoring/notification (internal/external)

Automation

- E-mail notification
- Automated alerting options (send an e-mail, send an SNMP trap, call a Java class, or call an external executable)

Database Support

- Microsoft SQL Server
- Oracle
- MySQL
- DB2

Interface

- Browser client
- GUI client
- Command-line client
- Customizable web interface

Architecture

- J2EE-based architecture
- JDBC-compliant
- Java-based (platform independent)
- Online help

Browser Support

- Internet Explorer
- Firefox
- Safari

Other FileXpress Products

(continued)

- Seamlessly move files from outside your corporate network, through the DMZ, to internal target servers.
- Delegate administrative and account management tasks to partners and helpdesk personnel.
- Support the file transfer protocols required by your partners, including HTTPS, FTP, FTPS, SFTP, PGP over FTP, and AS2.

Reflection® for Secure IT Now Bundled with FileXpress

Each FileXpress product comes bundled with the Reflection for Secure IT Windows Client. With this client, you can:

- Transfer files with a graphical drag-and-drop utility that supports FTP, SFTP (SSH), FTPS (SSL), and SCP.
- Connect to any standards-based SSH server for system administration or remote command execution (including the configuration and testing of FileXpress functions).
- Access corporate applications over encrypted connections.

Reflection for Secure IT may be used with FileXpress or on its own. Either way, it expands and strengthens your managed file transfer capabilities.
